Cabling Infrastructure

Why Diverse CTI?

- Over 20 years experience
- Certified By BICSI with a full time RCDD on staff
- BICSI Corporate Member
- 30 Year Infrastructure and Cable System Warranty

Your cabling infrastructure is the most important part of your communications network. As the physical layer of your network, it contains all of the physical connections to your communications devices such as computers and phones. Your cabling, being the medium that carries all of your data, should have the highest priority in your infrastructure.

About Us

With over twenty years experience in the Telecommunications and Datacom industry, Diverse CTI has invaluable, real world, hands on experience to get the job done right... the first time! Not only do we have the experience, but we also are one of Oklahoma's most knowledgeable and most certified companies. We are Corporate Members of BICSI (Building Industry Consultant Service International), and also have a full time *RCDD on staff. We have pledged ourselves to the highest level in standards, service, and commitment to our customers. Our goal is to earn your trust through our professionalism and expert service. We are Oklahoma's best and we will prove it.

About BICSI

Celebrating thirty years of service to the industry, BICSI is a world leader in telecommunications education. BICSI is a professional not-for-profit telecommunications association, founded in 1974 to serve and support the industry. BICSI now serves nearly 25,000 members and installers in more than 110 countries around the world. Their programs and interests promote the codes, standards, and methods for voice, data and video technologies.

BICSI offers courses, conferences, publications, and registration programs for telecommunications cabling distribution designers and technicians, as well as commercial and residential installers.

Its mission is to lead the telecommunications industry in the enhancement of quality services and methods around the globe by providing excellent education, promoting skill sharing, and assessing knowledge with professional registration programs.

BICSI actively participates in the National Electrical Code Panels and the Canadian Standards Association (CSA) C22.1. In addition, BICSI participates in all of the American National Standards Institute/Telecommunications Industry Association/Electronic Industries Alliance (ANSI/TIA/EIA) and CSA Premises Wiring Committees in both the United States and Canada.

***RCDD: Registered Communications Distribution Designer** title is given as a rating granted by BICSI. This rating is difficult to achieve and certifies that an individual is well educated in cabling distribution and design. In addition to passing an initial test, an RCDD must also go through ongoing education in order to maintain his/her RCDD certification.
